

Course Name: Solving Business Problems with NLP

Instructor: Juber Rahman

Project -4

1. In this project you will work on information extraction and structuring unstructured data with the help of NLP.
2. A dataset (legal_contract_txt) containing texts from legal contracts have been provided in the course folder
https://drive.google.com/drive/u/0/folders/1t5cavz5y-N2CVCM8VQ-1H_U1HFJvyYyJ
3. Identify the named entities in the documents and answer the following questions
 - Name of parties involved in the contract
 - Place of the contract
 - Date of contract
 - Contract value (Amount of money)
 - Contract duration
4. Structure the information extracted in a tabular format.
5. Steps 3 and 4 must be done programmatically , however verify the performance with human judgment.
